# CHSU COLLEGE OF OSTEOPATHIC MEDICINE

Global Learning Outcomes	Program Learning Outcomes
I. Learner Planning learning strategically then undertaking it with diligence. Receiving and reflecting on feedback. Adapting and making changes when necessary.	<ul> <li>2. Medical Knowledge: Comprehend and be able to apply knowledge of accepted standards of clinical medicine and new developments in medicine and promote life-long learning activities, including research.</li> <li>6. Practice-based learning and improvement: Understand the importance of critically evaluating practice methods; integrating evidence-based medicine into patient care, understanding research methods, and improving patient care practices.</li> <li>7. Systems based practice: Evaluate and analyze the available information and resources to demonstrate awareness of and responsiveness to the larger context and system of health care, and effectively identify system resources to maximize the health of the individual and the community or population in a cost-effective manner.</li> <li>10. Evaluation of Health Sciences Literature: Demonstrate effective use of available technology to locate health sciences literature and be able to appraise their validity, reliability, impact, and applicability by applying the critical concepts of medical knowledge, epidemiology, biostatistics, and research methodology with a goal to utilize the best and appropriate information for patient care.</li> </ul>
<b>II. Collaborator</b> Coordinating identities, social processes and human interactions to achieve shared goals in a context of mutual respect (includes negotiation, coordination, escalation, conflict resolution).	<ul> <li>4. Interpersonal and Communication skills: Learn and exhibit interpersonal and communication skills that enable them to establish and maintain professional relationships with patients, families and other members of the health care teams.</li> <li>9. Cultural competencies: Understand the scope of culture and elements that form and define it to recognize personal and professional tendencies toward bias and/or stereotyping and work to counter them; as well as be able to assist the health care team in developing a mutually acceptable, culturally responsive plan for patient care.</li> <li>14. Interprofessional Education and Collaboration: Comprehend and communicate the roles and responsibilities of other care providers; and in doing so, be able to choose effective communication tools and techniques for engaging other health professionals, appropriate to the specific care situations, in shared patient-centered problem solving for effective team-based care.</li> </ul>
<b>III. Reflector</b> Examining and assessing one's own performance and intellectual and emotional state of mind.	<ol> <li>Osteopathic Principles and Practice: Understand and apply knowledge of accepted standards in Osteopathic Manipulative Treatment (OMT). The educational goal is to train a skilled and competent osteopathic GME candidate who remains dedicated to life-long learning and to practice habits in osteopathic philosophy and manipulative medicine.</li> <li>Interpersonal and Communication skills: Learn and exhibit interpersonal and communication skills that enable them to establish and maintain professional relationships with patients, families and other members of the health care teams.</li> </ol>

## CHSU COLLEGE OF OSTEOPATHIC MEDICINE

IV. Professionalism	
Seeking collaboration with patients, society, one's disciplinary colleagues, and other professionals through trust and shared accountability. Demonstrating humanistic behavior, including openness, respect, compassion, probity, honesty, trustworthiness, and integrity that supersedes self-interest; striving to achieve the highest standards of performance through invention, resilience and grit; continuing to learn and grow throughout life.	<b>5. Professionalism:</b> Practice and uphold the Osteopathic Oath in the conduct of their professional activities that promote advocacy of patient welfare, adherence to ethical principles, and collaboration with health professionals, life-long learning, and sensitivity to a diverse patient population. Students should be cognizant of their own physical and mental health in order to care effectively for patients.
V. Communicator Oral and written exchange of ideas, sentiments, observations and opinions to achieve mutual understanding and influence.	<b>4. Interpersonal and Communication skills:</b> Learn and Exhibit interpersonal and communication skills that enable them to establish and maintain professional relationships with patients, families and other members of the health care teams.
	<ul> <li>8. Counseling for Health Promotion/Disease Prevention: Demonstrate an understanding of and commitment to the patient-centered medical concepts of continued, coordinated and comprehensive health care by applying available resources for health screening and prevention; as well as exhibit preventive health principles by modeling a healthy lifestyle.</li> <li>14. Interprofessional Education and Collaboration: Comprehend and communicate the roles and responsibilities of other care providers; and in doing so, be able to choose effective communication tools and techniques for engaging other health professionals, appropriate to the specific care situations, in shared patient-centered problem solving for effective term.</li> </ul>
VI. Decision Maker Achieving desired results by systematically gathering appropriate data, considering circumstantial factors, and making decisions and plans that meet contextual standards of excellence.	effective team-based care. <b>3. Patient Care:</b> Demonstrate the ability to apply knowledge needed to effectively treat patients and provide medical care that incorporates the osteopathic philosophy, patient empathy, awareness of behavioral issues, the incorporation of preventive medicine, and health promotion.
	<b>7. Systems based practice:</b> Evaluate and analyze the available information and resources to demonstrate awareness of and responsiveness to the larger context and system of health care, and effectively identify system resources to maximize the health of the individual and the community or population at large in a cost-effective manner.

# CHSU COLLEGE OF OSTEOPATHIC MEDICINE

	1. Osteopathic Principles and Practice: Understand and apply knowledge
	of accepted standards in Osteopathic Manipulative Treatment (OMT).
	The educational goal is to train a skilled and competent osteopathic GME
	candidate who remains dedicated to life-long learning and to practice
	habits in osteopathic philosophy and manipulative medicine.
	2. Medical Knowledge: Comprehend and be able to apply knowledge of
	accepted standards of clinical medicine and new developments in
	medicine and promote life-long learning activities, including research.
	3. Patient Care: Demonstrate the ability to apply knowledge needed to
	effectively treat patients and provide medical care that incorporates the
	osteopathic philosophy, patient empathy, awareness of behavioral
	issues, the incorporation of preventive medicine, and health promotion.
	6. Practice-based learning and improvement: Understand the
	importance of critically evaluating practice methods; integrating
	evidence-based medicine into patient care, understanding research
	methods, and improving patient care practices.
	7. Systems based practice: Evaluate and analyze the available
	information and resources to demonstrate awareness of and
VII. Practitioner	responsiveness to the larger context and system of health care, and
	effectively identify system resources to maximize the health of the
Possessing the range of competencies required	individual and the community or population at large in a cost-effective
to achieve professional licensure.	manner.
	11. Environmental and Occupational Medicine: Demonstrate the
	knowledge necessary to understand the policy framework and major
	pieces of legislation and regulations related to environmental and
	occupational health; as well as have the knowledge relating to fitness,
	disability and safe work place to be able to assess and providing control
	measures in an osteopathic evidence-based clinical evaluation and
	prescribe treatment if there is a risk of an adverse event from exposure
	to physical, chemical or biological hazards.
	12. Public Health Systems: Apply understanding of the interaction of
	public health and health care systems in the practice of osteopathic
	medicine as it affects health promotion and disease prevention; as well
	as recognize the impact of environmental and cultural influences to
	improve public health among divergent populations.
	13. Global Health: Demonstrate the knowledge and skills required to
	understand the differences between the US and non-US health care
	systems; and be able to provide appropriate preventive and post-return
	care for diseases infrequently encountered in the US, with an
	understanding of the threat of pandemic and/or endemic health events.
